YAXT - Bug #313

bug: xmap construction allows multiple writes to the same destination memory location

01/17/2013 11:12 AM - Joerg Behrens

Status:	Closed		**Start date:**	01/17/2013

Target version:				

Description

If multiple source processes have the same index that is required by a target then all of these source processes may be registered as data sources which may lead to collisions when the actual data exchange happens. Also, this may lead to a bloated xmap.
